

SCHEMA & LLMS.TXT PACK

LAB.ANONYFOX.COM

JSON-LD FILES

Structured data from your website

Domain	https://lab.anonyfox.com
Pages analysed	11
Existing schema types	Organization, FAQPage, Question, PostalAddress, ListItem, BreadcrumbList, Offer, Product, Article, Person, WebApplication, WebPage, SoftwareApplication, ItemList, WebSite
Order	YRUN0000000023

What's in the pack

01-sitewide-organization-website.jsonld – valid JSON; Organization: contains TODO placeholders

03-faqpage.jsonld – valid JSON; FAQPage: contains TODO placeholders

04-breadcrumb-example.jsonld – valid JSON; BreadcrumbList: contains TODO placeholders

llms.txt – 11 pages, links to selected English pages.

llms-full-outline.txt, INSTALL.md

Complete the TODO fields using published site facts. Validate the files, then install them using the included guide. Structured data must match the visible page content.

Organization + WebSite

Name	Anonyfox Lab
URL	https://lab.anonyfox.com/
Language	German
File	schema/01-sitewide-organization-website.jsonld

llms.txt

Install

1. JSON-LD: put each .jsonld file's content in a `<script type="application/ld+json">...</script>` in the `<head>`. 01 on all pages; 02 only for a local business with a published address; 03/04/05 only on matching pages.
 - WordPress: WPCode/"Insert Headers and Footers" or theme header; if Yoast/Rank Math output schema, don't duplicate Organization.
 - Shopify: theme.liquid before `</head>`.
 - Static sites: directly in the HTML.
2. Replace every TODO or delete the property. Don't invent: schema must match visible content.
3. Test: <https://validator.schema.org/> and <https://search.google.com/test/rich-results>
4. Publish llms.txt at <https://YOUR-DOMAIN/llms.txt> (plain text, UTF-8).
